

COMMUNICATIONS ENGINEER

A number of positions exist and we would like to fill it with suitably qualified candidates with the right attitude. This role would suit a recently qualified graduate with a bachelor degree from a reputable university. Your qualifications will include discipline such as Information Technology, electronic engineering, computer science, physics, mathematics, networking or telecommunications. Although the final position title will change depending on the position that you are assigned, you will be exposed to a wide range of technologies including internet and computing technologies, networking and telecommunications, and radio frequency engineering.

As a communications engineer, you will be involved in:

- Basestation engineering, testing and commissioning.
- Microwave radio engineering, implementation and operations.
- Network Management design, testing and verification.
- Customer Premises Equipment
- Liaising with contractors.
- Equipment evaluation and technical specifications.
- Analyzing and interpreting data.
- Report writing

A key component to the success of this role is the ability to work as a team. You will be given the training in order for you to perform the job. Network design, implementation and performance monitoring are your daily activities. Our network is designed to an acceptable standard and performance as perceived by our customers. You will develop and apply your knowledge to find creative solutions to the challenges of network design, mobile communications, data service requirements and internet and signalling protocols.

If you are the person we are looking for, we will offer an attractive salary and a fantastic environment to develop your career.
